# 1 Project Overview

CollabQuest is a full-stack web application designed to connect developers based on their skills and help them find compatible collaborators for coding projects.

## 1.1 Core Purpose

CollabQuest bridges the gap between talented developers by matching them using AI-based compatibility scoring.

# 2 Technology Stack

## 2.1 Frontend

React, Vite, React Router, Axios, Tailwind CSS, Context API

## 2.2 Backend

FastAPI, Uvicorn, Firebase Admin, Google Generative AI, Sentence Transformers

## 2.3 Database

Firebase Realtime Database (NoSQL)

# 3 Project Architecture

## 3.1 Architecture Overview

Three-tier architecture consisting of frontend, backend API, and database layer.

## 3.2 Data Flow

User → Frontend → Backend → Database → Response → UI Update

# 4 Backend Documentation

## 4.1 Backend Structure

main.py, database.py, quiz.py, c\_score.py, cleanjson.py

## 4.2 Core Modules

### 4.2.1 main.py

Handles routing, authentication, and CORS.

### 4.2.2 database.py

All Firebase database operations.

### 4.2.3 quiz.py

AI-based problem generation and evaluation.

### 4.2.4 c\_score.py

Compatibility scoring using NLP embeddings.

### 4.2.5 cleanjson.py

Cleans AI-generated JSON responses.

## 5 Frontend Documentation

### 5.1 Frontend Structure

React + Vite based component-driven architecture.

### 5.2 Key Components

Home, Login, Register, Profile, Users, Partners, Problems, Verification

### 5.3 State Management

Global state handled using Context API.

## 6 Database Schema

### 6.1 Users Collection

Stores user profile, skills, verification status, teams.

### 6.2 Teams Collection

Stores team members and projects.

## 6.3 Problems Collection

Stores coding problems for verification.

# 7 API Endpoints

## 7.1 Authentication APIs

POST /signup

POST /login

## 7.2 Compatibility APIs

POST /compatibility-score

GET /compatibility/compare

## 7.3 Verification APIs

POST /verification/generate-problem

POST /verification/submit-solution

# 8 Setup & Installation

## 8.1 Backend Setup

Install dependencies, configure Firebase, run Uvicorn server.

## 8.2 Frontend Setup

Install npm packages and run Vite dev server.

# 9 Development Workflow

## 9.1 Local Development

Backend and frontend run on separate terminals.

## 9.2 Best Practices

Modular code, RESTful APIs, reusable components.

# 10 Features & Functionality

## 10.1 User Authentication

Signup, login, profile management.

## 10.2 Skill Discovery

Browse and verify skills through AI problems.

## 10.3 Developer Discovery

Search and filter developers by skills.

## 10.4 Compatibility Matching

AI-powered compatibility scoring.

## 10.5 Team Management

Create teams and collaborate.

# 11 File Structure

## 11.1 Backend Files

main.py, quiz.py, c\_score.py, database.py

## 11.2 Frontend Files

App.jsx, Layout.jsx, components/, context/

# 12 Conclusion

CollabQuest provides a scalable and intelligent platform for developer discovery and collaboration using full-stack technologies and AI.
